The problem

deepai.org prompt: Structural biology professor working at his computer while overwhelmed with a large number of parallel writing projects.

Three kinds of voice-computing activities

- ✓ Speech-to-text [Voice In Plus]
- ✓ Speech-to-commands (include voice-triggered snippets) [Voice In Plus]
- Speech-to-code

Shortcut and snippet libraries for PX

Snippet libraries complement AI assistants

ChatGPT Ready

[Prompt: default] [gpt-3.5-turbo]

1 ###

2

3 How can I assist you today?

4

5 ### What are the pros and cons of using
libraries of code snippets as opposed to
using an AI -assttstant to return code?

6

7 Using libraries of code snippets can provide quick access to commonly used solutions and reduce the time spent on coding tasks. However, this approach may lead to copy-pasting without fully understanding the code or context. On the other hand, using an AI assistant to provide code suggestions can offer personalized recommendations and explanations but may require more time and effort to integrate into the workflow.

Common errors during transcription

- Wrong words inserted
- Omitted words
- Added words

Voice In Plugin for Chrome and Edge

Voice In

Get the #1 Speech-To-Text Chrome Extension.

Use your voice to type on [over 10,000 websites](#) in [50+ languages](#). Voice In transcribes your speech to text in real-time.

Trusted by 300,000+ users. Get it now for free.

Custom Commands

Enhance your experience with custom voice commands. These allow you to correct dictation errors, automate repetitive text entries, and perform actions like changing the dictation language, pressing keyboard shortcuts, etc.

For more information, [read our guide on using custom voice commands](#).

Homemade Voice-In commands

- **expand** acronyms
- **describe** summarizes what a program does
- **email** dsw (insert list of 190 e-mail addresses)
- **insert** code blocks
- **list** (e.g., font sizes in latex, steps in a protocol)
- **open** webpage (e.g., open ACA2024)
- **display** equation in display mode

biological-crystallography-voice-in

Introduction

This repo contains voice commands about biological crystallography for the automated speech recognition software Voice In Plus. Voice In Plus is a plugin for Google Chrome and Microsoft Edge. These short snippets of LaTeX are recognized and rendered correctly by most markdown typesetting languages including org-mode in Emacs and markdown cells in Jupyter and R Markdown notebooks.

Examples of voice triggers and their results

Voice trigger	Result
expand jac	Journal of Applied Crystallography
expand iucr	International Union of Crystallography
expression for sigmaA 2fo minus fc	$2mF_o - DF_c$

Debugging biocryst.csv

Error Detection

We can make this file [beautiful and searchable](#) if this error is corrected: It looks like row 2 should actually have 3 columns, instead of 2. in line 1.

Contents of biocryst.csv

- Expand > 150 acronyms.
- Open >100 websites.
- Insert space group symbols set in LaTeX.
- Return space number given a space group name.
- Insert key equations set in LaTeX in display or in-line mode.
- Insert code for PyMOL and CCTBX.

<https://github.com/MooersLab/biological-crystallography-voice-in>

Future directions

- Expand the current libraries.
- Build quiz for biocryst.csv.
- Support the use of voice computing in Web VSCode.
- Index snippet libraries to aid in AI retrieval.

Summary

- Speech-to-text eases writing prose.
- Text replacements can return validated information.
- Voice-triggered snippets insert equations and code in Jupyter markdown and code cells.
- Voice-triggered snippets work in all web-based editors.

“In God we trust. All others must bring data.”

W. Edwards Deming (1900-1993)

Hazards of voice computing

- Accidental recording of a conversation with a visitor.
- Accidentally dictate into an open code cell or file.
- External and internal microphones interfere during Zoom meetings.
- Clashes between active Automated Speech Recognition software packages.

Other software not covered in this talk

- **LilySpeaks** free and runs everywhere, Windows only
 - Nuance's **Dragon Naturally Speaking** (\$699, Windows).
 - ***Serenade** (free, future development in question, looks interesting for Speech-to-commands and Speech-to-code)
 - ***Talon Voice** (free, Python driven, tinker's rabbit hole)
 - mac OS's **Dictation**
 - Mac Os **Voice Control**
 - Digital assistants like **Siri** and **Alexa**.
- * Analog libraries on MooersLab.
